

LIST OF CLAIMS

Claims 1 - 22 and 24 - 25 (Cancelled)

Claim 23 (Previously submitted)

Claims 26 - 29 (New)

26. (New) A wall sconce comprising:

- (a) a wall mount;
- (b) means for mounting said wall mount on a wall;
- (c) a cavity in said wall mount;
- (d) an electric candle supported by said mount;
- (e) at least one battery in said cavity in said wall mount;
- (f) electrical conductive means connecting said at least one battery to said electrified candle;
- (g) said electrified candle being composed of a plastic portion and a wax portion; and
- (h) said wax portion has raised and lower portions for passing light at different light levels.

27. (New) A wall sconce comprising:

- (a) a wall mount;
- (b) means for mounting said wall mount on a wall;
- (c) a cavity in said wall mount;
- (d) an electric candle supported by said mount;
- (e) at least one battery in said cavity in said wall mount;

- (f) electrical conductive means connecting said at least one battery to said electrified candle;
- (g) said electrified candle being composed of a plastic portion and a wax portion; and
- (h) said plastic portion includes upper portions of different vertical height.

28. (New) A wall sconce comprising:

- (a) a wall mount;
- (b) means for mounting said wall mount on a wall;
- (c) a cavity in said wall mount;
- (d) an electric candle supported by said mount;
- (e) at least one battery in said cavity in said wall mount;
- (f) electrical conductive means connecting said at least one battery to said electrified candle;
- (g) diffuser means surrounding said electrified candle for diffusing any bright spot of light produced by said electrified candle; and
- (h) said diffuser means comprising translucent material surrounding said electrified candle, said translucent material comprising at least two portions having different translucent properties.

29. (New) A wall sconce comprising:

- (a) a wall mount;
- (b) means for mounting said wall mount on a wall;
- (c) a cavity in said wall mount;
- (d) an electric candle supported by said mount;
- (e) at least one battery in said cavity in said wall mount;
- (f) electrical conductive means connecting said at least one battery to said electrified candle;
- (g) said electrified candle including an upper end and said upper end includes vertically higher and lower relative portions whereby diffused light passes through said higher portion and non-diffused light passes over said lower portion; and
- (h) wherein said electrified candle is rotatable about its vertical axis for passing light through said higher and lower portions with different light intensities.
